1 Audit Statement

- 1.1.1 We have audited the evidence provided by Network Rail for the:
 - Variable usage charge (incl. electrification asset usage)
 - Capacity charge
 - Fixed track access charge
 - Stations long term charge
- 1.1.2 During the audit a number of issues were highlighted. These issues have subsequently been clarified by Network Rail and ORR. In some cases this has resulted in amendments to the final pricelists.
- 1.1.3 We can now confirm that the final spreadsheets produce the charges in accordance with our understanding of the final determination.
- 1.1.4 The final audited pricelists are included in Appendix B.

2 Review Background

2.1 Details of Review

- 2.1.1 As part of its role as Independent Reporter, Halcrow has been appointed jointly by Network Rail and ORR to undertake an audit of the final price lists and schedule of access charges which form an important part of the 2008 periodic review.
- 2.1.2 A number of charges have come from Network Rail's Infrastructure Cost Model (ICMv2) which itself has been the subject of an audit¹. In these cases, on the advice of the ORR, the charges were only audited back to the model outputs.
- 2.1.3 The audit process was scheduled to take place between the final determination and the start of the formal implementation process following the procedure laid out in Schedule 4A of the Railways Act 1993.
- 2.1.4 In practice, there was a need for a period of around 14 days between the ORR's final determination on 30 October 2008 and Network Rail supplying the final price lists and all supporting spreadsheets. This was to allow Network Rail time to take account of any differences between the final determination and its proposal including the efficiency treatment of the access charges.
- 2.1.5 ORR required the audit be completed by 5 December 2008 so that any changes resulting from the audit could be made in advance of their review notice.
- 2.1.6 This implied the following timetable:

Date	Audit process milestone
30 October 2008	Final determinations
14 November 2008	Network Rail to provide final pricelists and all supporting spreadsheets for audit
1 November 2008 – 5 December 2008	Audit of access charges takes place
5 December	Audit opinions provided to ORR
18 December 2008	Review notice served
5 February 2009	Last date on which Network Rail can object to the review notice
1 April 2009	Start of control period 4

Table 2.1.1 Original Audit Timetable

- 2.1.7 A draft report was issued to Network Rail and ORR on 9 December 2008, where certain issues were highlighted. The key findings of the draft report were generally accepted and all issues raised were clarified. In some cases this resulted in amendments to the final pricelists. This final report reflects these final pricelists. The final audited pricelists are included in Appendix B.

2.2 Access charges background

- 2.2.1 The access charges payable by train operators (both passenger and freight) to Network Rail for the next Control Period (CP4) (1 April 2009 – 31 March 2014) is a key output of the ORR's periodic review 2008.

¹ Independent Reporter A, Reporter Mandate – ICMv2 Audit ,Final Report 13/03/08 (available at <http://www.rail-reg.gov.uk/upload/pdf/pr08-halcrowaudit-130308.pdf>)

- 2.2.2 The development of the CP4 access charges has followed a new process where Network Rail has assumed greater responsibility for developing charges proposals. A description of how the new process works is given in Figure 2.2.1.

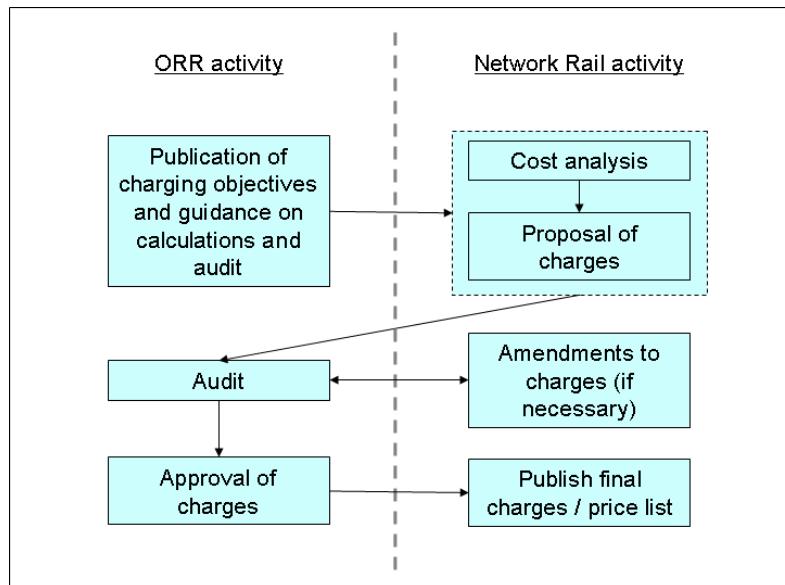

Figure 2.2.1 Process for developing CP4 access charges

- 2.2.3 In June 2006, the ORR published the charging objectives that Network Rail was supposed to take account of, and in some cases judge how to balance, while developing its access charges proposal. This was to assist ORR in their approval process by relating Network Rail's proposals to the ORR's statutory duties as well as the stakeholder views, as both of these contributed to the development of these charging objectives.
- 2.2.4 In June 2006, the ORR also published more detailed guidance to support Network Rail in making its proposal. The purpose of this was to make sure that Network Rail in its charges proposal took account of the work done to date or issues that the ORR thought, after discussing with stakeholders, were important to the development of the CP4 charges. Some of these have been followed by Network Rail while in other cases it has disagreed with the guidance and taken an alternative option but explained why, in terms of the guidance, in its submissions to the ORR.
- 2.2.5 The ORR set out their draft determinations on 5 June 2008. Some outstanding access charges issues have been consulted on since then.
- 2.2.6 The final determination, (published on 30 October 2008) sets out the ORR's approval of Network Rail's charges proposal, subject to detailed audit or where appropriate ORR's decisions if they have decided to implement charges different to Network Rail's proposal. All of these charges need to be implemented into track access contracts following the procedure in Schedule 4A of the Railways Act 1993.
- 2.2.7 The audit process ensures that the changes to values in the track access contracts, reflects the decisions made by the ORR in their final determination. Halcrow have been appointed to undertake the audit, and this report sets out the methodology adopted and the findings and conclusions from our audit. This audit verifies that all the access charges are consistent with ORR's final determination and accurately reflect Network Rail's underlying models (as appropriate) and are ready for implementation.

2.3 Audit methodology

- 2.3.1 The audit has been undertaken on the schedule of access charges and price list spreadsheets received from Network Rail. The initial charging spreadsheets received are listed in Figure 2.3.1. Updated versions were received during the course of the audit.

Area	Spreadsheet Title
Variable usage charge (incl. electrification asset usage)	001_VTAC_Step 1_ICM variable cost output.xls
	002_VTAC_Step 2_TTCI(UK) calculations.XLS
	003_VTAC_Step 3_Price list (lookup).xls
	Changes to vehicle characteristics_operator challenge.xls
	Check_price lists_December vs October.XLS
Capacity charge	Final CapacityTariff for CP4 Nov 08 V2.xls
Fixed track access charge	FTAC_FinalDeterminations.xls
Station long term charge	LTC Price List 191108.xls

Figure 2.3.1 Charging Spreadsheets provided for the Audit

- 2.3.2 A kick-off meeting to discuss the process was held with ORR and Network Rail on 14 November 2008. Subsequently all the relevant spreadsheets and data were received from Network Rail and ORR.
- 2.3.3 Our audit examined the individual charging spreadsheets to determine if they were correctly performing the calculations described in the ORR's final determination and identify any errors. The calculation of the following four CP4 access charges was audited:
- Variable usage charge (incl. electrification asset usage);
 - Capacity charge;
 - Fixed track access charge;
 - Stations long term charge.
- 2.3.4 The traction electricity charge was not audited on the advice of ORR.
- 2.3.5 For each of these charges specific checks were carried out, depending on their relevance to the charge. These checks are detailed in the Figure 2.3.2.
- 2.3.6 The following chapters outline our audit process and findings for each of these access charges. They list the following:
- Audit approach undertaken for the specific charge;
 - Documents and spreadsheets received from NR and ORR;
 - Key findings from the audit including any errors or issues identified;
 - Audit outcomes, including our view on the accuracy and robustness of the audit calculation.
- 2.3.7 It should be noted that our audit has not examined the principles behind the access charges, but has only examined the accuracy of the process currently adopted to calculate them.

3 Audit of CP4 access charges

3.1 Variable usage charge (incl. electrification asset usage)

Audit approach

3.1.1 The following audit process approach has been followed:

- trace the calculation of each charge in the price list back to the spreadsheet underpinning the usage charges for both passenger and freight;
- check that all vehicle characteristics (e.g. mass, speed etc.) are consistent with the current usage charge model, and if not to highlight and resolve any differences;
- For freight charges additionally ensure that the correct adjustments for the following charges have been applied to the freight vehicles as appropriate:
 - coal spillage charge,
 - coal spillage investment fund,
 - suspension band discount,
 - freight-only-line charge mark up.
- ensure that the efficiency and inflation factors have been applied as specified by the ORR or as in final determinations;

Documents received

3.1.2 We have reviewed the following documentation in auditing this charge:

- 001_VTAC_Step 1_ICM variable cost output.xls (provided by Network Rail on 14th Nov);
- 002_VTAC_Step 2_TTCI(UK) calculations.XLS (provided by Network Rail on 14th Nov);
- 003_VTAC_Step 3_Price list (lookup).xls (provided by Network Rail on 14th Nov);
- Changes to vehicle characteristics_operator challenge.xls (provided by Network Rail on 14th Nov);
- Check_price lists_December vs October.XLS (provided by Network Rail on 14th Nov);
- TTCI output 7 December 08.xls (provided by Network Rail on 7th Dec);
- 004_VTAC_Step 3_Price list _modified 7 December.xls (provided by Network Rail on 7th Dec);
- Check_price lists_initial audit list vs 7 Dec alterations.xls (provided by Network Rail on 7th Dec);
- Variable Charges modified 12 December.xls (provided by Network Rail on 12th Dec);
- Network Rail's Document "December 2008 price-lists and audit, context & overview" (Overview of approach to constructing final price lists 2008 11 13 version_002.doc);
- ORR-#126431-v1-freight_reconciliation_model_from_RT.XLS (provided by ORR);
- ORR-#224139-v2-Passenger_usage_charge_model.XLS (provided by ORR);
- ORR's Final Determination (Oct 2008).

Key findings

3.1.3 Following the audit approach detailed above we have audited Network Rail's spreadsheets for this charge. The key findings from the audit are given below. Detailed audit notes are provided in Appendix A.

Spreadsheet checks

- 3.1.4 We have been able to trace the numbers through Network Rail's spreadsheets for this charge; however this has been made more difficult due to the practice of hard coding values rather than using linked datasets. This has been improved in the later versions of the spreadsheets. A number of minor spreadsheet errors were detected but these have since been corrected by Network Rail. Details of these errors and their corrections are given in Appendix A.
- 3.1.5 The appropriate cost per vehicle mile for each electrified passenger vehicle, based on the type of electrification (OLE, DC or Dual), has been taken from the final determination. For dual vehicles, both OLE and DC rates are given. Network Rail have stated that dual usage vehicles will be billed the appropriate rate for the journey. In the final pricelist electrification usage has not been identified against each vehicle type, although it was provided in earlier versions of the pricelists.
- 3.1.6 The rates for electrified freight locos in the spreadsheet are given as £ 0.975/kGTM and £0.52/kGTM (2006/07 prices) for OLE and DC respectively. These rates are not provided in the final determination, but have been derived by Network Rail from the costs per vehicle mile rate given in the final determination. We checked the derivation of these values and the calculations were found to be correct. In the final pricelist electrification usage has not been identified against each loco type, although it was provided in earlier versions of the pricelists.

Vehicle characteristics

- 3.1.7 We checked the freight vehicle characteristics used in the spreadsheets against the wagon characteristics in the current (CP3) freight model. We found that generally the characteristics either matched the current model or had been updated with reference to source of the new data. However, we did find that 4 wagons (OCAN, SCAZ, SKAK, SKAZ) had changed suspension bands without an explanation of the data source. Network Rail is reviewing the reason for this change in suspension band and will advise if an adjustment is required.

Freight adjustments

- 3.1.8 The suspension band discount is applied within the calculation of the prices. We checked the application of these discounts and found them to be correct. The rates being used were as per the final determination.
- 3.1.9 The adjustments for coal spillage, coal spillage investment fund and freight-only-line mark-ups are made in the final pricelist spreadsheet. The £/kGTM values used agree with the values given in the final determination. The ORR have confirmed that these values are in 2006/07 prices.

Efficiency and inflation

- 3.1.10 For both the passenger and freight pricelists Network Rail have applied the ORR's efficiency factor of 34%.
- 3.1.11 For all variable pricelists Network Rail have applied the ORR's inflation factor of 1.104 to inflate the 2006/07 price to 2009/10 prices.

Audit outcomes

- 3.1.12 We have audited the evidence provided by Network Rail for the variable usage charge (incl. electrification asset usage). We can confirm that the spreadsheets produce the charges in accordance with our understanding of the final determination.

3.2 Capacity charge

Audit approach

- 3.2.1 The following audit process approach has been followed:
- trace the calculation of charge in price list back to Network Rail's supporting spreadsheet;
 - check that weekend and freight discounts has been correctly applied;
 - ensure that the efficiency and inflation factors have been applied according to the following advice from ORR:
 - The capacity charges do not need to be uplifted by efficiency factors.

Documents received

- 3.2.2 We have reviewed the following documentation in auditing this charge:
- Final Capacity Tariff for CP4 Nov 08 V2.xls (provided by Network Rail on 14th Nov);
 - Final Capacity Tariff for CP4 Dec08 V4.xls (provided by Network Rail on 12th Dec);
 - Network Rail's Document "December 2008 price-lists and audit, context & overview" (Overview of approach to constructing final price lists 2008 11 13 version_002.doc);
 - ORR's Final Determination (Oct 2008).

Key findings

- 3.2.3 Following the audit approach detailed above we have audited Network Rail's spreadsheet for this charge. The key findings from the audit are given below. Detailed audit notes are provided in Appendix A.

Spreadsheet checks

- 3.2.4 We have generally been able to track through Network Rail's spreadsheets from the current charges to proposed price lists. However, for the passenger charges we have found that proposed changes to the list of service groups, and thus new prices, have been provided as hard coded data, showing no traceability of how the new prices have been determined. For the majority of these new prices, we have been able to align them to similar service groups. The one charge we have found to misalign is for First Capital Connect between Kings Cross and Cambridge. This charge used to be £0.28, but now appears to be £0.12.
- 3.2.5 Network Rail have advised that Kings Cross to Cambridge has been incorporated into the 'EG04' service group in the 'updated passenger' tab of the spreadsheet. This was largely based on a judgement from Faber Maunsell that this mapping best preserves the Service Group categories. The judgement is also that this change is not sufficient to amend the capacity charge rate averages for the Service Groups (i.e. EG05 stays at 28p and EG04 at 12p). We believe that this explanation is satisfactory.

Application of weekend and freight discount

- 3.2.6 Network Rail have applied a 25% discount to both the passenger and freight weekend capacity charges. Although the ORR Final Determination does not directly state that its determination is for a 25% weekend discount, it does state that a weekend discount should be introduced. The 25% figure was proposed by Network Rail. ORR have confirmed that they accept the 25% weekend discount rate for the capacity charge.
- 3.2.7 Based on the ORR's determination to remove the distinction between freight commodity types, Network Rail have modelled the freight capacity charge as a single figure for all freight operators and commodity using a weighted average based on the current charges and the actual train kms per service group in 2006/07.

- 3.2.8 We found that this averaging process included 90% of the current charges and 77% of actual train kms from 2006/07. This resulted in a charge of £0.15. Network Rail have advised that the ‘engineering haulage’ commodity does *not* attract capacity charges currently, so they are rightly excluded from the weighting process. The other major category is the ‘ICM Misc FRE (De-minimis results)’ commodity which is roughly 9% of the total train km. This is one of the features of the ICM that to preserve computability, it does not track train km by commodity below a defined materiality threshold. On each route this is small, but adding up all these small values gives a reasonable proportion of the total.
- 3.2.9 Network Rail have interrogated the make-up of this commodity. The weighted average capacity charge for this 9% of total is calculated as 16p, rather than the overall weighted average of 15p. However, including this 16p in the spreadsheet, results in an immaterial impact on the overall average (15.44p as compared to 15.37p without adding in this 9%) and thus Network Rail proposed that 15p should remain the weighted average for freight. We believe that this explanation is satisfactory.

Efficiency and inflation

- 3.2.10 In line with the advice from the ORR, no efficiency has been applied to the capacity charges.
- 3.2.11 For both the passenger and freight capacity charges, Network Rail have used an RPI figure of 1.0243 to inflate 2008/09 prices to 2009/10 prices. This RPI figure has been provided in correspondence by the ORR.

Audit outcomes

- 3.2.12 We have audited the evidence provided by Network Rail for the capacity charge. We can confirm that the spreadsheet produces the charges in accordance with our understanding of the final determination.

3.3 Fixed track access charge

Audit approach

- 3.3.1 The following audit process approach has been followed:
- check schedule of fixed charges against final determinations grant levels and against Network Rail supporting spreadsheet output from the fixed charge model;
 - check reallocation of charges;
 - ensure that efficiency and inflation factors have been applied as specified by the ORR or as in final determinations.

Documents received

- 3.3.2 We have reviewed the following documentation in auditing this charge:
- FTAC_FinalDeterminations.xls (provided by Network Rail on 20th Nov);
 - FTAC_FinalDeterminations (2008-12-12).xls (provided by Network Rail on 12th Dec);
 - Network Rail's FTAC Notes (email dated 20th November);
 - Network Rail's FTAC Calculation Notes (FTAC audit notes v02.doc);
 - ORR's Final Determination (Oct 2008).

Key findings

- 3.3.3 Following the audit approach detailed above we have audited Network Rail's spreadsheet for this charge. The key findings from the audit are given below. Detailed audit notes are provided in Appendix A.

Spreadsheet checks

- 3.3.4 To align the ICM outputs with the single till figures given in the final determination, Network Rail have factored the SBPu values before running them through the allocation module within ICM. To ensure that the final determination values have been correctly incorporated into the spreadsheet, we have checked the total given on sheet "065_FD_SingleTill" with the values given in the final determination. Figure 3.3.1 shows this check and provides a reference to the source of the figures within the final determination.
- 3.3.5 The value for Schedule 4 and 8, which is given in table 16.3 of the final determination, has not been included in this sheet. NR have advised that, "The FTAC modelling ignores both sides of Sch 4 and 8 – the costs and the balancing access charges supplement – on the basis that they directly cancel each other out. Therefore gross revenue requirement shown in spreadsheet is lower than table 7 in ORR FDs – balanced by lower income". The ORR have confirmed that they are satisfied with this explanation.

Reallocation of charges

- 3.3.6 We have checked the process for reallocation of the FTAC to the franchised TOCs and have found no errors in the spreadsheets.

Efficiency and Inflation

- 3.3.7 As Network Rail is using the final determination as the basis for this charge, the resulting pricelist uses the ORR's assumed efficiency values.
- 3.3.8 Network Rail have correctly applied the ORR's inflation factor of 1.104 to inflate the 2006/07 price to 2009/10 prices.

Extract from Network Rail Spreadsheet		Final Determination (FD)	
Line Item	CP4 Total	Value in FD	Table in FD
Maintenance	5,016.1058	5,016	16.3

⁵ Rounding Error in Final Determination

⁶ Grants before re-profiling

Audit outcomes

- 3.3.9 We have audited the evidence provided by Network Rail for the fixed track access charge. We can confirm that the spreadsheet produces the charges in accordance with our understanding of the final determination.

3.4 Station long term charge

Audit approach

- 3.4.1 The following audit process approach has been followed:
- trace the calculation of charge in price lists back to Network Rail's supporting spreadsheet;
 - ensure the final averaging process over CP4 works correctly to produce one charge per station;
 - ensure that efficiency and inflation factors have been as specified by the ORR or as in final determinations.

Documents received

- 3.4.2 We have reviewed the following documentation in auditing this charge:
- LTC Price List 191108.xls (provided by Network Rail on 20th Nov);
 - LTC Price List amended post submission v5.xls (provided by Network Rail 8th Dec);
 - LTC Price List amended post submission v8.xls (provided by Network Rail 12th Dec)
 - "Long Term Charges – exceptions for different treatment in Review Notice" (LTC implementation - exceptions for discussion with ORR.doc)
 - ORR's Final Determination (Oct 2008).

Key findings

- 3.4.3 Following the audit approach detailed above we have audited Network Rail's spreadsheet for this charge. The key findings from the audit are given below. Detailed audit notes are provided in Appendix A.

Spreadsheet checks

- 3.4.4 We have checked Network Rail's spreadsheet and have found that it contains two linked datasets of station information. The latest version of the spreadsheet provides a summary of the charges by SFO. We have found that the total by SFO aligns with the values given in the final determination except for "National Express East Coast" which is £2.48m (2006/07 prices) in the spreadsheet, but is £12m pa in the final determination. The franchised total of the spreadsheet is £119,428,175, which matches the £119m pa in the final determination. The sum of the line items in table 21.2 of the final determination equals £128m pa and thus there seems to be an error in the final determination. The ORR have confirmed that there has been an error in table 21.2, and that the annual charge for National Express East Coast should read £2m in each year, the total figure should remain as £12m.
- 3.4.5 Network Rail have provided a note to explain their treatment of the LTC for different stations. This note lists 13 new stations. We have checked and can confirm that these stations have been considered within the spreadsheet, with 4 included in the pricelist and the remaining 9 noted as needing a LTC, but not included in the pricelist as the Station Access Conditions Annexes have yet to be agreed and so the ORR's review notice would be ineffective in relation to these 9 stations.
- 3.4.6 This note also lists stations which do not require a LTC. We have checked and can confirm that these stations have been correctly identified within the spreadsheet and thus are excluded from the pricelist.

CP4 Averaging

- 3.4.7 The spreadsheet is averaging the CP4 cost across the 5 years evenly. This is being applied correctly to each station.

Efficiency and Inflation

- 3.4.8 It is unclear from Network Rail's spreadsheet how efficiency has been handled. However as the resulting charges generally agree with the final determination, we believe these to align with the ORR's efficiency assumptions.
- 3.4.9 Network Rail have correctly applied the ORR's inflation factors of 1.104 to inflate the 2006/07 price to 2009/10 prices and 1.0243 to inflate from 2008/09 prices to 2009/10 prices.

Audit outcomes

- 3.4.10 We have audited the evidence provided by Network Rail for the station long term charge. We can confirm that the spreadsheet produces the charges in accordance with our understanding of the final determination.

4 Appendix A – Audit Notes

Access Charge	Workbook Title	Sheet Title	Comments ⁷
Variable usage charge	001_VTAC_Step 1_ICM variable cost output.xls	Summary costs by SRS	<p>This sheet provides ICM traffic metrics by strategic route. The variable cost is express as Cost £/kgtkm in 2006/07 prices, with the Civils and Signalling cost calculated from set variability percentages and the track cost coming from "Track detail" sheet.</p> <p>This results in a total variable cost of £273.21m PA (2006/07 prices)</p> <p>It is stated that these figures have come from ICMv2 in 06/07 prices with end CP3 efficiency.</p> <p>We have reviewed this ICM extract as part of our previous review.</p>
		Track detail	<p>This sheet provides track renewals and maintenance variability costs in the form of £ per 1000 GTkm. These costs are provided by Strategic Route Section and are summarised at Route Category and national level.</p> <p>It is stated that these figures have come from ICMv2 in 06/07 prices with end CP3 efficiency.</p> <p>We have reviewed this ICM extract as part of our previous review.</p>
	002_VTAC_Step 2_TTCI(UK) calculations.XLS	Aggcosts	<p>This sheet has a total value of £273.199m taken from ICM output in March 2008. This value is split by Track (exc RSD), Structures, Signals (which gets included within Track for purpose of the spreadsheets calculation) and Surface Damage.</p> <p>There is no explanation of how the track figure from ICM (£243.4m) is split between Track and Surface damage. Surface damage is exactly 30% of the total track amount. Network Rail have advised that this division was determined through modelling and engineering judgement during the SPB Update.</p> <p>A summary of the total EGTm and EVM are given by passenger and freight. These are used to derive cost per 1000 EGTm for Track and Structure and a cost per 1000 EVM for surface damage.</p> <p>A table of Uplift factors for subsequent years (2009/10 – 2014/15) are provided for both Passenger (1% uplift for each year) and Freight (uplift factors of: 2%, 44%, 3%, 5.9% and 5.8%). There is no explanation of where these factors have come from, however these factors are not used in determining the final price list.</p>

⁷ Issues identified are in Red text. Any unresolved issues have been left in Red Bold text.

Access Charge	Workbook Title	Sheet Title	Comments ⁷
		Passenger	<p>This sheet pulls together the information about all passenger vehicles (by class) and calculates EkGTM values for Track and Structures and a EkVM value for surface. These are then multiplied by the Cost £/000 egtm and Cost £/000 EVM given on Sheet "Aggcosts". The total cost for all passenger vehicles is £195,103.9k.</p> <p>These costs are converted into a "Pence per Veh Mile" value for each vehicle class. For each year in CP4 these values are uplifted using factors given on sheet "Aggcosts"</p>
		Freight	<p>This sheet pulls together the information about all freight vehicles (by class) and calculates EkGTM values for Track and Structures and a EkVM value for surface. These are then multiplied by the Cost £/000 EkVM and Cost £/000 EVM given on Sheet "Aggcosts". The total cost for all freight vehicles is £78,095k.</p> <p>These costs are converted into a "£/kgtm" value for each vehicle class. For each year in CP4 these values are uplifted using factors given on sheet "Aggcosts"</p> <p>We have checked the calculation used for the suspension bands and they are being applied correctly</p>
		Pax Vehicle Data	<p>This sheet contains passenger vehicle data. The data is hardcoded, except for some Operating Speeds which are calculated from the max speed and constants from the "Parameters" sheet.</p>
		Frgt Veh Data	<p>This sheet contains hardcoded freight vehicle data.</p> <p>We checked this data against the wagon characteristics in the current freight model [ORR-#126431-v1-freight_reconciliation_model_from_RT.XLS]. Generally we found that the characteristics matched or had been updated with reference to source of the new data. However, we did find that 4 wagons [OCAN, SCAZ, SKAK, SKAZ] had a different suspension band without an explanation of the data source. (NR are checking this)</p>
		Commodity Data	<p>This sheet aligns the 6 ORR freight commodity types to the 22 NR commodity types, including details of speed for different loading types.</p>
		Axe Surf Damage	<p>The sheet provides the Tgamma for each curve radius by Curving Class and axle. The sources of the hardcoded figures are given. For some curving classes the Tgamma values have been calculated using linear relationships to corresponding classes of different weights.</p> <p>For each Tgamma value a value is calculated for crack damage, wear damage, RCF damage and net damage. These calculations use rate given in the "Constants" sheet.</p> <p>The net damage for each axle is added to give a total damage by radius for each curving class.</p>

Access Charge	Workbook Title	Sheet Title	Comments ⁷
		Vehicle Surf Damage	<p>Sheet takes the total net damage for sheet "Axe Surf Damage" for each Vehicle and factors by the track km in each Curvature Band from the "Curves" sheet. This results in total damage km and damage per mile by curving class.</p> <p>The links to "Axe Surf Damage" sheet are direct links (not looked up) and thus could be subject to error. We checked that the correct lines are being reference and found them to be correct. NR have advised that the error corrected by TCCI was this problems for Loco3_50. The calculation in "Vehicle Surf Damage" referenced the wrong row in "Axe Surf Damage". This resulted in the Loco3_50 having the same surface damage as the Coach_12_60. This was corrected between this pricelist and the previous one.</p>
		Pax Curve Class	Sheet has a lookup table [Range Name: Pax_Curve_Class] which assigns a curving class to each passenger vehicle type.
		Frvt Curve Class	<p>Sheet has two lookup table:</p> <ul style="list-style-type: none"> • [Range Name: Frvt_Curve_Class] which assigns curving class to each freight vehicle type for both loaded and empty. It also looks up the Number of Axles, the suspension band and the bogie type from "Frvt Veh Data" sheet. • [Range Name: SusBand_BogieType] which assigns a curving class and factor to each suspension band. The factors given match the values given in the determination.
		Curves	<p>Sheet contains the total track km per curvature band. Total km 29,006km.</p> <p>Source: Network Rail Design Geometry database.</p>
		Parameters	Sheet contains hardcoded values for cost calculation parameters.
		Constants	<p>Sheet contains hardcoded values for:</p> <ul style="list-style-type: none"> • Grinding Cost • Renewal Cost • Depth Ground • Side Wear Limit • Crack Damage Rate • Wear Damage Rate
		Notes	This sheet is used as an issues log for the model's development

	003_VTAC_Step 3_Price list (lookup).xls updated to 004_VTAC_Step 3_Price list _modified 7 December.xls updated to Variable Charges modified 12 December.xls	Route Summary	<p>This sheet provides hardcoded values for the following system characteristics:</p> <ul style="list-style-type: none"> • Route km • Variable Cost (£k) • Passenger VM (million) • Freight VM (Million) • Pax GTM (Million) • Freight GTM (Million) • Total GTM (Million) • Pax £/kGTM • Freight £/kGTM • Route £/kGTM • Pax pence/VM
		Passenger Vehicles	<p>This sheet provides the hardcoded price list for passenger vehicles.</p> <p>We have checked and found that this list has been correctly copied from the output of "002_VTAC_Step 2_TTCI(UK) calculations.XLS".</p> <p>These are the 2006/07 prices</p> <p>The sheet also applies an efficiency of 34% to the prices, which is applied as a discount $[(1 - 0.34) * \text{Price}]$. This value aligns with paragraph 19.18 of the final determination</p> <p>Electrification type has been identified against each vehicle type [OLE, DC or Dual] and a cost per vehicle mile is allocated as detailed in the determination. For Dual vehicles, both OLE and DC rate are applied. Within the final pricelist, NR have stated that "DUAL USAGE VEHICLES WILL BE BILLED APPROPRIATE RATE FOR JOURNEY" The values used align with that given in table 19.7 of the final determination</p>
		Elec asset usage	<p>This sheet contains a hardcoded list of passenger vehicle, which includes all those given in sheet "Passenger Vehicles" expect for 2 [098/6 and 099/0]. Each vehicle has the electrification type identified.</p> <p>There is an inconsistency between this list and the one on "Passenger Vehicles" sheet due to the two less vehicles. It looks as if this list is correct, as the "Passenger Vehicles" list has 2 Elec MU [rows 118 and 119] without electrification. NR have corrected this in the updated spreadsheet "004_VTAC_Step 3_Price list _modified 7 December.xls"</p>

Access Charge	Workbook Title	Sheet Title	Comments ⁷
		Freight Vehicles	<p>This sheet provides the hardcoded price list for freight vehicles.</p> <p>We have checked and found that this list has been correctly copied from the output of "002_VTAC_Step 2_TTCI(UK) calculations.XLS".</p> <p>These are the 2006/07 prices</p> <p>The sheet also applies an efficiency of 34% to the prices, which is applied as a discount [(1-0.34)*Price]. This value aligns with paragraph 19.18 of the final determination</p> <p>Coal Spillage is identified at £0.233/kGTM for the vehicles with commodities of either "Coal ESI" or "Coal Other" using a IF function. This value aligns with paragraph 19.52 of the final determination.</p> <p>Coal spillage investment is identified at £0.022/kGTM for the vehicles with commodities of either "Coal ESI" or "Coal Other" using a IF function. This value aligns with paragraph 19.53 of the final determination</p> <p>Freight Only Lines – ESI Coal is identified at £0.282/kGTM for the vehicles with commodities of "Coal ESI" using a IF function. This value aligns with table 19.13 of the final determination</p> <p>Freight Only Lines – spent nuclear fuel is identified at £ 1.902/kGTM for the vehicles FNAB, FNAC, KUAA, KYAF and PFAC(other). These are direct inputs. This value aligns with table 19.13 of the final determination</p> <p>Elec asset usage charge for freight are identified at £ 0.975/kGTM for the vehicles 86/5, 86/6, 86/9, 87/0, 89/4, 90/0, 91/1 and 92/0 [32 rows in total]. These are direct inputs. The rate of £0.975/kGTM is not provided in the final determination, but is derived from the value given in table 19.7. NR have stated their method in their explanation document.</p> <p>No inflation is applied. NR and ORR have confirmed that all the adjustments are in 2006/07 price base.</p>
		RSD Curve Class T-Gammas	<p>This sheet has hardcoded numbers from the T_Gamma data from "002_VTAC_Step 2_TTCI(UK) calculations.XLS"</p>
		FINAL_pass_usage	<p>This is the formatted sheet for CP4 PRICE LIST - PASSENGER VARIABLE USAGE CHARGE.</p> <p>A mechanism for applying inflation is built into the sheet. Using correct factor of 1.104.</p> <p>A copy of this pricelist is provided in Appendix B.</p>
		FINAL_pass_EAUC	<p>This is the formatted sheet for CP4 PRICE LIST - PASSENGER ELECTRIFICATION ASSET USAGE CHARGE (09/10).</p> <p>A mechanism for applying inflation is built into the sheet. Using correct factor of 1.104.</p> <p>A copy of this pricelist is provided in Appendix B.</p>

		FINAL_freight_EAUC	This is the formatted sheet for CP4 PRICE LIST - FREIGHT ELECTRIFICATION USAGE CHARGE (09/10). A mechanism for applying inflation is built into the sheet. Using correct factor of 1.104. A copy of this pricelist is provided in Appendix B.
		FINAL_freight_coal spillage	This is the formatted sheet for CP4 PRICE LIST - COAL SPILLAGE & COAL SPILLAGE INVESTMENT FUND (09/10). A mechanism for applying inflation is built into the sheet. Using correct factor of 1.104. A copy of this pricelist is provided in Appendix B.
		FINAL_freight_FOL ESI coal	This is the formatted sheet for CP4 PRICE LIST - FREIGHT ONLY LINE ESI COAL (09/10). A mechanism for applying inflation is built into the sheet. Using correct factor of 1.104. A copy of this pricelist is provided in Appendix B.
		FINAL_freight_FOL spent nuclear	This is the formatted sheet for CP4 PRICE LIST - FREIGHT ONLY LINE spent nuclear (09/10). The title of this sheet is incorrect. (corrected) The mechanism for applying inflation is not being used correctly (corrected). Using correct factor of 1.104. A copy of this pricelist is provided in Appendix B.
		Final Price Lists	Hardcoded copies of pricelists on provided on the "FINAL" sheets. We have checked and found that the values match those given on the linked sheets.
	Changes to vehicle characteristics_operator challenge.xls	Sheet1	This sheet details the changes made to freight wagon properties for variable usage charging made due operator challenge.
	Check_price lists_December vs October.XLS	Passenger Vehicles	This sheet provides a comparison between the current passenger price list and the one provided in October.
		Freight Vehicles	This sheet provides a comparison between the current freight price list and the one provided in October.

Access Charge	Workbook Title	Sheet Title	Comments ⁷
Capacity charge	Final Capacity Tariff for CP4 Nov 08 V2.xls	Current_Passenger	<p>Provides the current passenger charges by operator/ service group in 2008/09 prices.</p> <p>All data on this sheet is hardcoded.</p> <p>There is no reference to the source of this information.</p> <p>There are 614 rows of data.</p>
	updated to Final Capacity Tariff for CP4 Dec08 V4.xls	Proposed Changes	<p>Similar hardcoded data as that provided on "Current_Passenger" sheet, except:</p> <ul style="list-style-type: none"> • 29 additional rows have been added to the bottom of the data (no charges) • TOC code for "Scottish Power Supply (22113001)" [row 338] has changed from "HF" to "HA" • Service code for "LIVERPOOL ST - WICKFORD/SOUTHMINSTER/SOUTHEND VIC (PEAK)" [row 28] changed from "EB01" to "EB02" • "Off Peak" added to the description for "COLCHESTER - SUDBURY" & "Cambridge - Kings Lynn" [rows 30 & 45] • "Peak" added to the description for "CAMBRIDGE TO KINGS LYNN (WA)" [row 48] <p>There are 643 rows of data.</p>
		Updated_Passenger	<p>Similar hardcoded data as that provided on "Proposed Changes" sheet, except:</p> <ul style="list-style-type: none"> • "Cardiff - Ebbw Vale" has been added to this sheet (not on "Proposed Changes" sheet) • There has been remapping for First Capital Connect. This generally aligns except for "Cambridge - Ely - Kings Lynn" and "Kings Cross – Cambridge" use to be £0.28, now "GN Outer (Kings X - Letchworth/Royston/Cambridge (slow))" and "GN Outer (Kings X - Letchworth/Royston/Cambridge (slow))" are £0.12 • 19 rows from "Proposed Changes" sheet have been removed from this sheet • Of the 29 additional rows in "proposed changes", the bottom 6 are not in this sheet. The other 23 are in the sheet, but 16 have no charge against them. It is not always clear where the proposed charges for the other 7 have come from or why the others have been left at zero. <p>There are 560 rows of data.</p> <p>Network Rail have advised that Kings Cross to Cambridge has been incorporated into the 'EG04' service group in the 'updated passenger' tab of the spreadsheet. This was largely based on a judgement from Faber Maunsell that this mapping best preserves the Service Group categories. The judgement is also that this change is not sufficient to amend the capacity charge rate averages for the Service Groups (ie EG05 stays at 28p and EG04 at 12p).</p> <p>The "Current Capacity Charge 08/09" have been uplifted by RPI of 1.0243 to 2009/10 prices, resulting in "Weekday Capacity Charge 09/10". These have then been discounted by 25% for the "Weekend Capacity Charge 09/10".</p>

Access Charge	Workbook Title	Sheet Title	Comments ⁷
		Current_Freight	<p>Provides the current freight charges by operator, service group & commodity in 2008/09 prices. All data on this sheet is hardcoded. There is no reference to the source of this information. There are 245 rows of data.</p>
		TrainKM	<p>Provides freight train km by constant traffic section and service group for year 2006/07. Data taken from ICMv2.1 traffic module (dated: 6th Mar 2008) All data on this sheet is hardcoded. There are 22634 rows of data.</p>
		One_Freight_Rate	<p>Pivot table of data in "TrainKM" showing the Total train kms by operator [46 rows] Total of 58,613,984km which matches total of Column I on "TrainKM" Sheet The average Current Charge by operator and commodity is taken from the Charges in "Current_Freight" Sheet, using the operator and commodity within a Sumif function. This method covers 90.2% of the current charges in the calculation. There are 11 rows in the pivot table that have no current charge. These rows account for 23% of the total train kms. The current charges and train kms of the populated rows [35 rows in total] are used to produced a weighted average current charge of £0.15 in 2008/09 prices. Network Rail have advised: The 'engineering haulage' commodity does NOT attract capacity charges currently, so they are rightly excluded from the weighting process. The major other category is the 'ICM Misc FRE (De-minimis results)' commodity which is roughly 9% of the total train km. This is one of the features of the ICM that to preserve computability, it does not track train km by commodity below a defined materiality threshold. On each route this is small, but adding all the small bits together adds up to a reasonable chunk of the total. NR have interrogated the make-up of this commodity. The weighted average capacity charge for this 9% of total is calculated as 16p, rather than the overall weighted average of 15p. When you put the 16p into the spreadsheet, then this has what NR consider to be an immaterial impact on the overall average: 15.44p as compared to 15.37p without adding in this 9%. I think this means that we should retain 15p as the weighted average for freight. This "Current (08/09) Tariff consolidated to one rate" have been uplifted by RPI of 1.0243 to 2009/10 prices, resulting in "Updated Weekday Capacity Charge(09/10)". This has then been discounted by 25% for the "Updated Weekend Capacity Charge (09/10)".</p>
Fixed track access charge	FTAC_Final Determinations.xls	010_ICM to allocPOT	This sheet provides a hardcoded consolidation of ICM line items to FTAC allocation parameters

Access Charge	Workbook Title	Sheet Title	Comments ⁷
updated to FTAC_FinalDeterminations (2008-12-12).xls	020_Renew Group to allocPOT		This sheet provides a hardcoded allocation of renewal spend group to allocation pots
	030_Station IncomeAnalysis		This sheet provides a hardcoded breakdown into station fixed charge, MS QX and lease income
	040_Allocation Metrics		This sheet provides a hardcoded allocation metrics between ALLOC POT and Traffic Metric
	050_Prepoc Renewals		This sheet provides a hardcoded download of the pre-process renewals data and calculation long run annual average for each SRS / Asset
	060_Summary PAYGdownload		This sheet provides a hardcoded download of PAYG (cost categories) line items from ICM
	065_FD_Single Till		<p>This sheet reproduces the ORR's values from their model We have matched these values to details in the final determination. The value for "Other Income" doesn't match, but ORR have advised that this is due to rounding in the final determination.</p> <p>The value for Schedule 4 and 8, which is given in table 16.3 of the final determination, has not been included in this sheet. NR have advised "The FTAC modelling ignores both sides of Sch 4 and 8 – the costs and the balancing access charges supplement – on the basis that they directly cancel each other out. Therefore gross revenue requirement shown in spreadsheet is lower than table 7 in ORR FDs – balanced by lower income"</p>
	070_SBPu_SingleTill		<p>This sheet takes inputs from "060_SummaryPAYGdownload" and hardcoded data to provided a equivalent cost breakdown as that given in sheet "065_FD_Single Till" based on the outputs of SBP update</p> <p>The sheet has a built in check, which is showing that the summary is correctly pulling the base data.</p>
	075_SBPu_2_FD_Factors		<p>This sheet produces factors by cost code and year from the Final determination values [given on sheet "065_FD_Single Till"] and the SBP Update values [given on sheet "070_SBPu_SingleTill"]</p> <p>The derived factors are then exported to the ICM FTAC access module (as a new table) where they were applied to all relevant values.</p>
	080_OpProp_by_SFO		This sheet provides Operational Property expenditure (modelled) with analysis by SFO, as allocation metric for station related RAB income

Access Charge	Workbook Title	Sheet Title	Comments ⁷
		081_MS_retail_Income	This sheet takes the Managed Stations Retail Income and prorates it to stations after removing the Investment Impact and reducing the Growth Rate. This is then associated with SRSs and processed for input back into ICM
		082_MS_LTC_QX	This sheet take LTC and QX costs for managed stations and allocates them to TOCs
		085_FranStat LTC	This sheet redistributes the benefits attributed to non-franchise operators back to the franchise operators. The data for the benefits is hardcoded data.
		086_FranStat Lease	This sheet allocates the lease income to TOCs. A number of corrections are applied.
		087_FranStat Summ	This sheet summarises the station incomes by TOC from Sheets "086_FranStat Lease" and "085_FranStatLTC" using a VLOOKUP function.
		090_Final Calcs	<p>This sheet contains the final calculations in a series of steps (from NR explanation note):</p> <ul style="list-style-type: none"> • Purple range on left is output from FTAC module allocation process which is then adjusted for: • Franchise remapping since 06/07 (as base traffic data comes from 06/07) • Deduction – at TOC level – of LTC / station lease income from franchised stations • Deduction – at TOC level – of LTC / other income for managed stations (main change from SBPu calcs which assumed no LTC at managed stations) • Pro rata of results to reflect amounts recovered through grant [therefore columns AG-AK show the 'no-grant' view of FTAC] • Adjustment for existing enhancement charges that continue – i.e. Chiltern Evergreen <p>We have checked that the spreadsheet is performing these steps and were satisfied that it is.</p>
		091_Price list	<p>This sheet provides the proposed fixed charges by TOC for CP4 (in 06/07 prices). These are pulled from sheet "090_Final Calcs" using a SUMIF function. The Totals match the figures given in table 19.16 of the determination.</p> <p>There is a function built-in for applying inflation to these prices and the inflation factor is set to 1.104 as per ORR's advice.</p> <p>A copy of this pricelist is provided in Appendix B.</p>
Station long term charge	LTC Price List amended post	Final Price List	Provides a station long term charge pricelist by facility owner and by station. These lists are linked from sheet "For ORR".

Access Charge	Workbook Title	Sheet Title	Comments ⁷
	submission v5.xls updated to LTC Price List amended post submission v8.xls	For ORR	<p>A hardcoded list of 2504 stations which need a LTC. This list aligns with the list given on sheet "LTCs", but both lists are hardcoded and thus not linked. In the later version of the spreadsheet these lists have been linked.</p> <p>This sheet has a built in mechanism for applying inflation and the correct values for inflation have been used.</p> <p>The total by SFO aligns with the values given in the final determination expect for National Express East Coast which is £2.48m on this sheet, but in the guidance as £12m PA.</p> <p>The franchised total of the updated spreadsheet is £119,428,175 which aligns the £119m PA in the final determination</p> <p>The values for managed stations align with that given in the final determination.</p>
		amendment log	Provides a list of amendments made to the LTCs List.
		LTCs	<p>A hardcoded list of 2504 stations which need a LTC plus an additional 180 station that don't need a LTC and 9 stations that do require a LTC but the costs are not in the SBP.</p> <p>The spreadsheet does not provide a source for the cost data. The calculation of charges from the costs is correct.</p> <p>When the auto filter is used to resort this data, the prices are misaligned [eg Abbey Wood changes from £61,049 to £241,666]. (corrected) We have checked this dataset against the list given on sheet "For ORR" and have found them to be consistent.</p>
		CP4 reprofiling	This sheet provides Ops Prop Engineering CP4 v LR spend factors. It is not clear what these factors are for or how they are being applied.
