

Network Rail SBP

The following improvements were included in the East Anglian Rail Prospectus and will bring economic and other benefits to the region and should be included in the control period 5 plan.

Improvements in line speeds on the Great Eastern Main Line and the West Anglia routes are needed to improve journey times.

The Felixstowe to Nuneaton route needs to be upgraded for the increasing freight traffic. In particular the junctions at Ely and Haughley need improving. Capacity on the Felixstowe branch needs increasing. These improvements would also be of benefit to passenger trains.
